

## **Atrenne Integrated Solutions Partners with Leading Edge Medical Company on Medical Device Enclosure**

BROCKTON, Mass., Feb. 21, 2017 – Atrenne Integrated Solutions announced today, its subsidiary, Atrenne Computing Solutions, has been selected as the enclosure supplier for a leading edge medical company. The enclosures will be designed, manufactured and supported at Atrenne’s Computing Solutions division in Brockton, Mass. The new program represents Atrenne’s expansion into the medical industry by providing design and manufacturing support for medical devices.

Expanding into the medical device design and manufacturing is a natural extension for Atrenne. From concept to production, Atrenne is providing medical device companies with hardware development for a variety of innovative treatment devices. Experienced in-house program management and engineering resources work closely with customers’ product development groups to ensure form, fit and function are achieved in the device design.

“Our engineering expertise in enclosures is easily transferred to medical device equipment,” said Mark Medeiros, Vice President of New Business Development- Global Commercial Business. “We have the program management and engineering experience to help medical companies overcome their design challenges, ensuring their product viability and allowing them to focus on their core competencies.”

### **About Atrenne Integrated Solutions**

Atrenne Integrated Solutions, Inc. is an advanced, vertically-integrated, component and system provider serving aerospace, defense, computing, communications, and other technology-driven industries. Atrenne delivers integrated components, electronic packaging, fabricated metal, electronic assemblies and value-add build-to-print manufacturing services to industrial markets across the globe.
